- released: the card on the account ends with 41126683 and it expires next year

Identifier scale is 7+ digits, taken from the deployment's own structured recognizer. The rendering step is display-only - storage keeps the words - so this is the form the leak takes on screen, not additional leaked information. Whisper writes numerals itself, so it leaves the renderer nothing to assemble; the renderer is unchanged.
Every value is fictional.
